

Fuel Quantity Test Set

8000

The 8000 Fuel Quantity Test Set is a universal tester for AC Capacitance type systems. It is OEM accuracy and safety approved and requires no external power. It meets or exceeds the range, accuracy and safety requirements for fuel quantity systems up to 8000 pF and is designed to operate with guarded capacitance type systems. The tester can measure and simulate tank capacitance from 0.1 to 7999.9 pF. It can measure insulation breakdown from 50 K Ω to 5000 M. Ω with an accuracy of \pm 5% of nominal reading. The 8000 is a small, self-contained, battery powered, analog test set that can measure system insulation, capacitance, and simulate current to drive mA style indicators. The unit is small enough to use in confined places, but accurate enough to use as a bench tester.

The 8000 comes in a standard configuration and includes a guarded three-terminal megohmmeter. A standard lead package is provided with all the accessories required to adapt any aircraft fuel quantity adapter cable to the test set. This unit in conjunction with the appropriate Adapter Cable interface provides the operator with a complete fuel quantity test system.

8000 Accessories

- 101-00541 Accessory Lead Package
(Included with all new units)
- 195-00013 Test Set Carrying/Shipping Case

Features

- > Measures capacitance of individual or interconnected tank units or unit simulators
- > Measures insulation resistance of wiring, tank units or other discrete components
- > Simulates capacitance representative of empty, partially full or full tank units or systems
- > 0.1 pF resolution throughout range
- > Interchangeable aircraft interface modules
- > 3-terminal megohmmeter with 6 selectable test points
- > State-of-the-art low battery drain circuitry

8000 Dimensions
