### **RD-300 & RD-301 FAQ**

Q. What are the major differences between RD-301 and RD-301A?

A. The two big differences on the RD-301A is the Heterodyne output and EFF Power function. Please see the specification sheets. Another small difference is the RD-301A has a power supply that can handle 100-240 volts without doing any transformer switching.
