T-RX

Avionics tester

AvionTEq
www.avionteq.com

CCX
TECHNOLOGIES

The T-RX is an all-in-one avionics tester that conducts 100+ tests on over 16+ systems with only 1 device.

Avionics testers are not new, however, just because something has been done a certain way doesn't mean it has to continue in that way.

We simplify avionics testing.

1 device for 100+ tests

The T-RX combines all tests into one small, lightweight device that fits into a single case.

Makes it easier to do your work efficiently with more mobility.

Straightforward

We integrate the software and antennas you need and design the user interface to be as intuitive as possible.

Reduces set up and training time.

Connected

Wi-Fi and Ethernet interfaces are integrated for simple software upgrades, feature updates, and generation of test reports.

Increases your efficiency.

Automated reporting

Data from some tests can be saved and generated into a PDF report.

Enables you to easily share your results to customers with consistent formatting.

3-day calibration

To provide the most accurate test data, your T-RX needs to be calibrated annually. We do this in 3 days.

Allows you to resume work quickly.
