

*A cost effective alternative
for analog cellular, SSB,
paging and mobile radio
testing*

- Analog meter and VFD (Vacuum Fluorescent Display) offer high visibility in all lighting conditions
- Convenient service analyzer with duplex and simplex connectors
- Standard internal spectrum analyzer to 1 GHz
- Built-in 1 MHz oscilloscope
- Comprehensive testing of analog and advanced digital paging with the AC510 option

RF Solutions

Designed for land mobile professionals with demanding RF testing requirements, the 1200 Super S has a sensitive 2 μ V triple conversion receiver capable of monitoring AM, FM and SSB carriers within the low band, VHF, UHF and high band ranges.

Depending on your specific needs, the 1200 Super S also gives you the choice of receiving straight "off the air" or through a direct connection to a T/R port.

Recognized for its versatility, the 1200 Super S supports DCS, DTMF and pulsed audio signaling formats.

The 1200 Super S also meets RF measurement needs for:

- RF frequency error
- RF power
- Audio frequency error
- CTCSS frequency
- CTCSS modulation

In duplex mode the 1200 Super S is capable of simultaneously generating and

receiving frequency offsets in 2.5 kHz steps. The duplex feature can be configured to operate in three modes:

- Testing using separate transmit and receive ports
- Testing using one common transmit/receive port
- "Off-the-air" duplex testing

With standard features like a 1000 MHz spectrum analyzer and built-in 1 MHz oscilloscope, the 1200 Super S virtually eliminates the need for costly additional equipment purchases. An optional tracking generator makes cable testing simple.

Paging Solutions

The versatility of the 1200 Super S also allows comprehensive testing of the most popular paging protocols, including encode/decode or 2-tone sequential, 5/6 Tone testing..

For those involved with advanced paging protocol systems, the AC510 option supports the following paging standards:

- Flex
- POCSAG
- Golay Sequential Code (GSC)
- NEC D3

Trunking Solutions

With the CLEARCHANNEL LTR® trunking option, the 1200 Super S is an ideal platform for testing LTR mobiles, portables and repeaters. For basic repeater testing, the 1200 Super S allows you to perform extensive receiver and transmitter tests. For more in-depth analysis, the LTR test option emulates the repeater system and

allows testing of home repeater access and next repeater access, including Handshake and Hand-off operation.

In addition, with 760 trunking channels, an internal tracking generator and user friendly LTR programming screens, the 1200 Super S is designed to give you the greatest control and flexibility possible.

Complex Functionality That's Simple to Use

From the user interface to functions and displays, the 1200 Super S allows technicians of any skill level to fully utilize its vast testing resources.

- Intuitive user interface makes complex testing simple and efficient.
- CTCSS encode/decode feature makes it easy to work with sub-audible tones.
- A standard RS-232 port allows remote testing.
- Internal memory allows storage of up to 99 RF frequencies.

From programming automatic test sequences to executing standard measurements, the operating system of the 1200 Super S provides a high level of testing. Yet the 1200 Super S is so user-friendly, you'll spend less time setting up tests and more time testing.
