

### **ATC-601 and ATC-601-2 FAQ**

Q. What are the major differences between ATC-601 and ATC-601-2?

A. There is no difference between how a ATC-601 and an ATC-601-2 operates. The -2 just means that the unit has been made CE compliant for RFI/EMI and Safety issues and can be sold in Europe. If both the ATC-601 and ATC-601-2 units have the same MPU software in them then they will operate the same way.

The RFI/EMI changes involved changing the gasket around the edge of the front panel and putting a shield around the LCD display to help keep the stray RF from getting out of the unit. The Electrical Safety changes involved changing the AC connector and fuses on the front panel and putting extra insulation around the high voltage wires in the unit.
