<b>Comments</b>	

***The ADTS505 and DPS450 air data test sets are for all intents and purposes the same item. GE Sensing manufacture all of these test sets and the only difference between the two items is that the DPS450 is labeled as a Barfield product and the ADTS505 is labeled as a GE Sensing product. Both units are physically and structurally the same and they are both built to the same performance specification including accuracy ratings.***
