PSD30-2G vs PSD30-2AF

The PSD30-2G is different from the PSD30-2AF in that the 2G only has one DC capacitance range called a Smith scale and no Megger function to measure resistance. The PSD30-2AF has multiple DC capacitance ranges and the Megger function.

The PSD30-2G interface cables only have banana plug connectors while the PSD30-2AF or PSD60-2R units have BNC and Canon connectors on them.
