

Airborne Radio Maintenance System – 3515ARM

Product Overview

- Tests aircraft radio systems, including the receiver/transmitter, antenna, coax cables and audio intercom operation
- Capable of performing over-the-air (OTA) test, direct connect test, coax test and antenna test
- Allows settings and results to be stored and retrieved later for historical or statistical analysis
- Capable of testing various radio models, from HF through UHF, AM and FM

Key/Unique Features

- Provides an organizational level test capability for aircraft radios and installations
- Provides a means to test the transmitter, receiver, antenna and coaxial cabling
- Saves time and money – reduces “No Fault Found”. Over-the-air testing can be done in minutes.
- Replaces multiple test instruments with a compact, portable system
- Simplified operation and repeatable operation using automated test programs

Aeroflex 3515ARM Contents

- 3515AR Radio Test Set
- Rugged transit case
- Accessories, cables and adapters for connection to antenna coax, radios and audio system
- Capable of testing other radio systems, such as tactical radios, ground radio systems and commercial radios
